Strong group.

To be a long-term strong and reliable partner: This goal characterizes our acting, is the guiding principle for the CHIRON Group. With innovative products and services, we facilitate precise, productive and flexible machining in many different industries, all over the world. We continuously strengthen our leading position in the market, acquire new fields of expertise and thus secure you the decisive competitive edge beyond today.

Micro5

Where small parts require dynamic and high-precision machining, the Micro5 has caused a mini revolution. The machining center with four or five axes is extremely compact and can be set up very quickly almost anywhere – in the production area or directly right at the work station. The 5 in the name stands for the ideal 5:1 ratio of machine size to workpiece and for maximum efficiency: Energy consumption is 50 times lower in comparison to conventional systems. For increased autonomy, the Micro5 can be easily automated with the Feed5 handling system.

Process advantages

– Travel X – Y – Z max.	78 – 56 – 50 mm
– Spindle speed	60,000 rpm
– Torque max.	10 Ncm
– Chip-to-chip time	3.5 s
– Tool options	60
– Tool taper	HSK-EZ 15
– Position accuracy	< 2 µm

08 Series

Minimum tolerances of a few μm and top surface quality: You can meet these requirements with the versatile machining centers of the 08 Series. All models represent high performance in a compact design. They can be set up quickly, are easy to operate, very stable, highly dynamic and low-maintenance. Thanks to the modular structure, there are numerous configuration possibilities. Any 08 Series basic machine can be assembled into an individual solution that fits perfectly to your production tasks.

Highly efficient and multifunctional. For the lowest cost per piece.

12 Series

So you want synchronized production quality at low cost per unit? The machining centers of the 12 Series combine these stipulations and are ranked the best in their class in terms of speed, compact design and versatility. On the FZ 12 S five axis in proven travel column design, workpieces with high surface quality can be manufactured in one clamping arrangement. The double-spindle DZ 12 S five axis performs five axis simultaneous operations using high-performance control options.

15 and 18 Series

The machining centers of the 15 and 18 Series are one of the best machine tools of its class in terms of speed, compact design, stability and reliability. They feature enormous performance reserves for powerful CNC milling and, thanks to their modular design, can be assembled to your perfect individual solution. With, for example, the appropriate spindle and table variant, with fast basket tool changer or pick-up tool magazine, with integrated workpiece changing device 0°/180° for loading and unloading during machining. Providing always powerful cutting, precision and high availability at low unit costs.

16 and 22 Series

Whether FZ/DZ 16 or FZ/DZ 22 – both series convincingly answer your requirements regarding high precision, dynamics and best surface quality for larger, increasingly complex workpieces. Basis for this is a fundamentally new machining platform with mobile gantry design. Thus, the rigidity is significantly increased, resulting in even more precise machining. The single-spindle FZ 16 S five axis is designed for special precision requirements in 5-axis machining, the double spindle DZ 16 W is the specialist for larger quantities. With its 600 mm spindle distance, the DZ 22 is the ideal solution for complete machining of large-volume components in the automotive industry.

25 and 28 Series

The 25 and 28 Series are designed for machining complex, large-volume components. With large spindle distances of 800 or 1,200 mm, DZ 25 and DZ 28 enable the double-spindle production of aluminum components for the automotive and aerospace industries – in a perfect combination of productivity, precision and dynamics. Further advantages for your manufacturing practice: a compact, flexible machine layout, spindles that can traverse independently in X and Z directions and simple automation with robot or gantry. Operating and loading take place on separate sides, for best access to the work area and good visibility into the process.

Intelligent high volume production. In an optimized process.

Feed5

Feed5 is a 6-axis handling robot for loading and unloading the Micro5 and enables increased productivity and autonomy, especially for large series. The system feeds workpieces and tools automatically and can be combined with one or two Micro5 to form an efficient and very compact production platform.

Advantages with Feed5

- Handling system for up to two Micro5
- Workpiece and palett changer
- Increased autonomy, thanks to storage for up to 10 paletts
- Blow off of equipment and workpiece

A

Automation solutions

- A Micro5 with handling system Feed5
- B AGV option
- C VariocellMove

B

Machining workpieces with high autonomy. Flexible in every way.

VariocellMove

Higher machine uptime, increased efficiency, reduced unit costs, less strain on operators: With the VariocellMove, you can achieve these benefits wherever they are currently needed. The compact robotic cell with inclined pallet system for intelligent workpiece handling can be flexibly combined with changing milling and mill-turning centers from the CHIRON Group into a highly productive unit. Depending on the application, additional stations can be integrated, e.g. for turning the workpieces. Laser scanners create graded protective areas around the VariocellMove. When operators approach, the speed is reduced (level 1) or the system is shut down (level 2).

Advantages with VariocellMove

- Handling system for the 12, 15, 16, 18, MILL and baseline Series
- Compact unit with a small footprint
- Intuitive operating and programming
- High operating safety thanks to laser-scanned protective zones
- Smart workpiece handling and fast pallet exchange
- Robot reach up to 2,000 mm
- Handling capacity up to 15 kg
- Loading capacity per drawer max. 300 kg
- Drawer size 1,100 x 570 mm
- Workpieces up to 250 mm height / diameter
- Optional gripper unit for prismatic workpieces

VariocellUno / VariocellPallet

Every CHIRON Group automation solution merges consistently high manufacturing quality, low unit costs, short run-up times and flexibility for a wide range of tasks in an optimum process.

Integrated and cost-effective: The **VariocellUno** transforms your machining center into a highly-productive, autonomous manufacturing unit. Handling robots, workpiece stores and exchange equipment for loading and unloading during machine operation are incorporated into the machine.

Greater flexibility and dynamism: The **VariocellPallet** gives the five-axis machining centers of the 12, 15, 16, 18 and MILL Series greater dynamism and flexibility in machining small batches and complex workpieces, as well as when manufacturing single parts with long machining times.

Digital solutions. Real added value.

SmartLine

Whether you operate in the automotive industry, mechanical engineering, aerospace, medical or precision engineering: The digitalization of your production facilitates greater efficiency, higher availability and increased productivity. SmartLine – a modular portfolio of digital systems from the CHIRON Group – harnesses this potential and adds real, lasting value to your machining centers, in terms of both production and the wider business.

All SmartLine modules can be integrated either as a standalone or in combination with others, with each digital system adding value to a specific area. Their individual functions and strengths combine to create an impressive package, providing extra efficiency, availability and productivity.

Intelligent manufacturing solutions. From planning to series production.

Turnkey

As a user, you can expect a manufacturing solution that is as individual as it is intelligent. A solution that uses the quantity structure and framework conditions to transfer your concrete machining task into a Turnkey process specific to your workpiece. To do so, the engineers and technicians of the Application division contribute their expertise for all phases from planning to series production readiness and deliver a production-ready overall solution of machining centers, tools, clamping devices and automation. Completed with the appropriate services over the entire lifecycle.

The process

- Comprehensive process design
- Engineering and project management
- Validation of statistical process capability
- Assurance of target productivity
- Customized automation
- Production support during the start-up phase
- Trainings for optimal use of the solution
- Tailored services

CHIRON Group
RemoteLine

The right services. At the right time.

SmartServices

Real added value is also offered by SmartServices, digital services based on software solutions from the SmartLine portfolio. Regardless of location or distance from your machinery, SmartServices are on-hand to help you convert the potential of your manufacturing processes into increased profitability.

LifetimeSolutions

High machine availability, low operating costs, and the highest workpiece quality at minimum cost per part. This is the CHIRON Group commitment delivered with each machining center. An integral part of this commitment is the highly efficient CHIRON Group service. Nearly 500 service professionals in 26 countries provide comprehensive support, as trusted partners throughout the entire lifecycle of your machine with traditional on-site services and other services such as maintenance, repair, optimization and modernization.

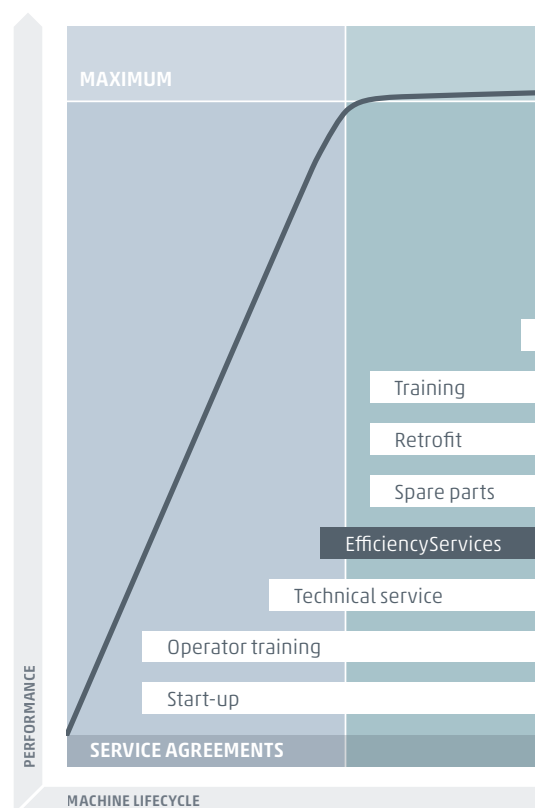

However, in today's manufacturing, professional service encompasses much more. It is targeted response, with the right services, at the right time. This is exactly what LifetimeSolutions provides: Based on the various phases of the machine lifecycle, as well as your specific needs, the CHIRON Group service specialists assemble a complete package of tailored services. With clear added value: More time for machining, lower operating costs.

MODERNIZE

ENHANCE PRODUCTIVITY

An original. Of the sustainable kind.

Refurbishment

A CHIRON Group machining center is an investment in high-quality machine technology and thus in sustainability. In permanently high production rates, short process times, consistently high quality. Advantages that pay off even longer with a refurbishment. Thus the lifecycle of existing machines can be increased – and not only that: During a complete refurbishment, the specialists renew all important elements such as drives and main spindles and, if necessary, modernize the control system. The systems manufacture 30 to 40 percent faster than before. At the same time, the energy requirements decrease, the environmental footprint is getting smaller.

In addition to the aspect of sustainability, a refurbishment is also an interesting option in other respects: Low investment costs and short delivery times for a machining center facilitate the entry into quality production with the CHIRON Group. An individual refurbishment, if desired also as a turnkey solution, prepares your machine for new tasks. In addition, the CHIRON Group has a pool of machines: used machines in in three refurbishment categories, as-new demonstration machines and pre-configured machining centers of the baseline Series.

CHIRON Group SE

Kreuzstraße 75
78532 Tuttlingen
Germany

The CHIRON Group, headquartered in Tuttlingen, Germany is a global company specializing in CNC vertical milling and mill-turning machining centers, as well as turnkey and automation solutions. Comprehensive services and digital solutions complete the portfolio. The Group has a global presence, with production and development sites, sales and service subsidiaries, and sales agencies worldwide. Key customer sectors are the automotive, mechanical engineering, medicine and precision engineering, aerospace industries, as well as tool manufacturing.
